

CoastRI

Research Infrastructure connecting land and sea

Coastal Research Infrastructure (CoastRI) is an initiative of the National Collaborative Research Infrastructure Strategy (NCRIS)

The current state

- Our climate and oceans are changing at unprecedented rates
- The 2022 SoE Report indicates:
 - Our environment is deteriorating
 - Climate change threatens all native ecosystems
 - Environmental management isn't well coordinated
 - Environmental decline is affecting human wellbeing
- Our economies and communities rely on our natural resources in numerous ways – e.g. \$81b Blue Economy increasing to >\$100b by 2025
- We need more observations and data to prepare for future change, support decision-making, and facilitate sustainable use

The coastal challenge

- Over 50% of Australians live within 7 km of the coast – this is where we live, work and play
- To understand climate changes and increase preparedness we need understand implications of ocean processes on coastal habitats
- Increased real-time data can inform forecasting and predictions
- IMOS is leading a consortium of NCRIS capabilities to establish national-scale coastal research infrastructure to address these issues

There is an opportunity to create societal benefit and impact for coastal populations through partnership and collaborative approaches

Bureau of Meteorology
City planners
National, State and local governments
Emergency services
Finance and insurance
Industry (ports, shipping, tourism, fishing)
Indigenous communities
Home owners, beach users, the public

Establishing a CoastRI

Vision: Research infrastructure connecting land and sea

Objective: To gather comprehensive and integrated scientific data from diverse sources, enabling us to better understand, predict, and address the opportunities and imminent risks facing Australia's coast for all peoples.

Challenges and opportunities

Southern Coastal Research Vessel Fleet

CHALLENGES
 Coastal erosion / change
 Implications of sea level rise
 Built environments resilience
 Impact of human activity on coastal regions

Observing coastal environments

Data management and integration

Predictive coastal modelling commons

Evidence-based coastal adaptation and future proofing

USERS
 Resource Managers
 Insurance Companies
 Planners

Coastal Risk Australia images
 High tide in 2100 based on sea level rise of 0.74 m

2019

What's happening?

- The NCRIS consortium is conducting a consultation process to develop a proposal for the 2024 NCRIS funding round
- The proposed program will be designed to create a step-change advance in our understanding of our coastal environment by:
 - Collecting novel data streams
 - Aggregating existing but difficult to access data streams
 - Supporting modelling and forecasting
 - Enhancing and value-adding to existing programs and products
 - Underpinning planning and decision-making related to coastal change to support government, industry, cities and communities

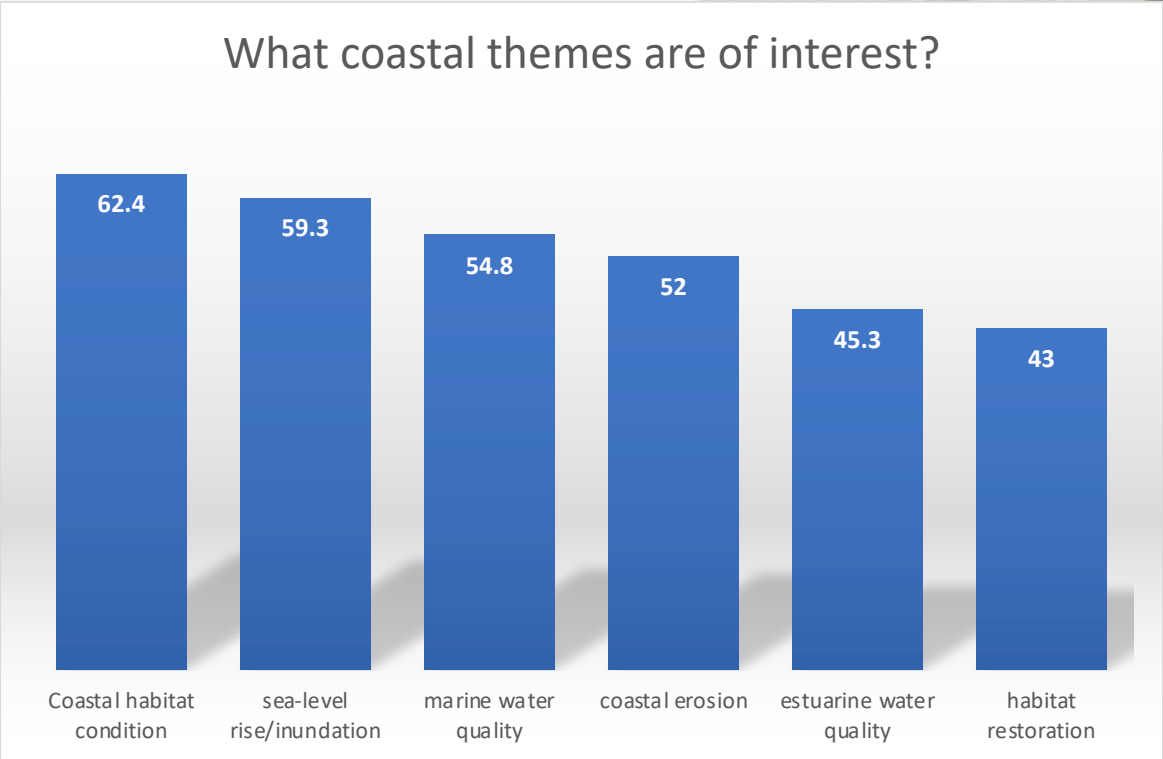

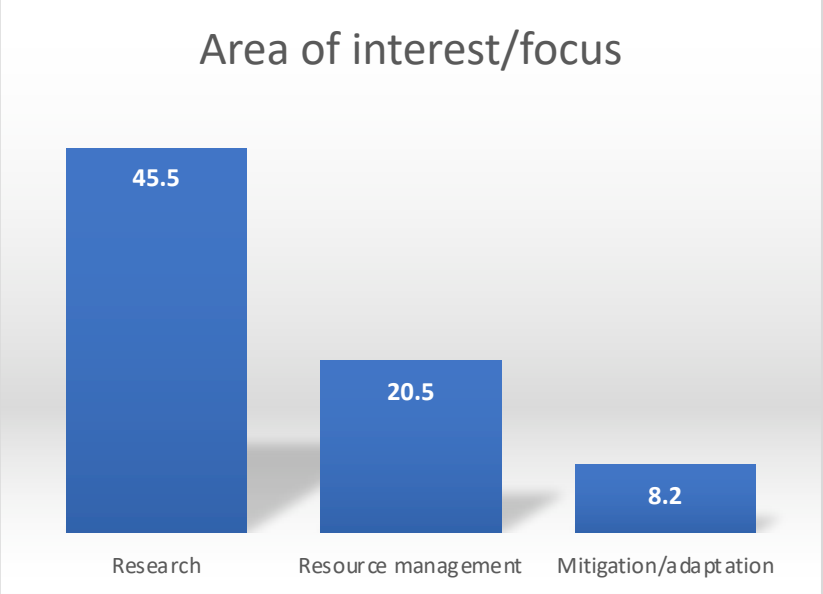

Designing CoastRI

- Consultation with end-users to identify:
 - Existing programs
 - Data/information needs
 - Use cases to support collection of new data streams (e.g. impact assessment, mitigation strategies, forecasting)
 - Opportunities for partnership and/or leveraging of existing activities
- Priority activities will:
 - Be broad/national-scale and have multiple end-users or data uses
 - Maximise the capability of the NCRIS program and its partners through cross-NCRIS collaboration

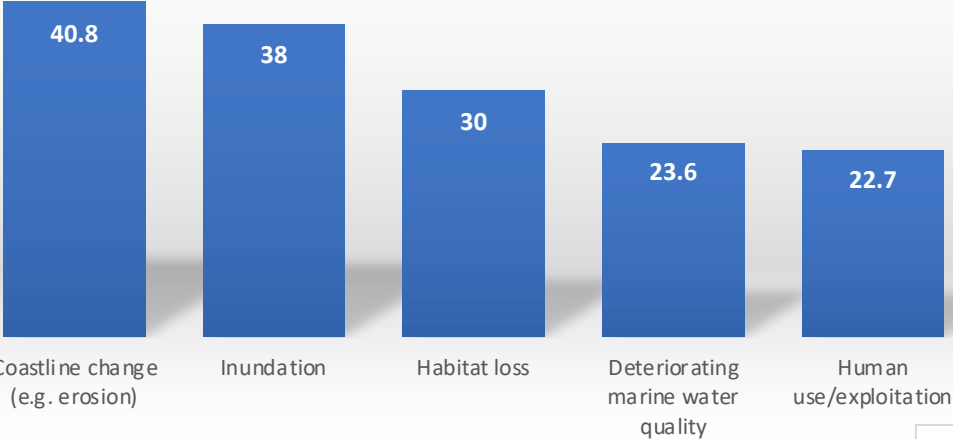

Initial survey results

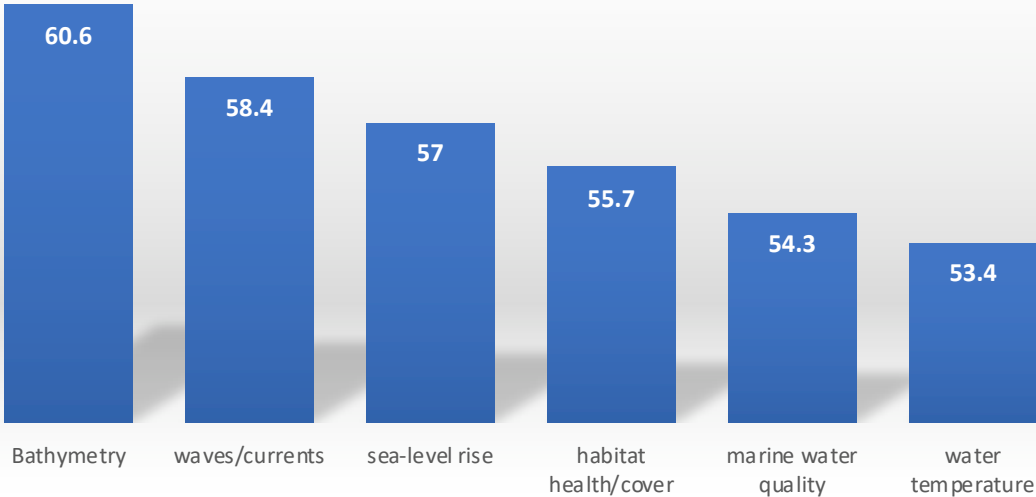

Initial survey results

Most pressing issues (ranked 1-2)

What observations/information is needed?

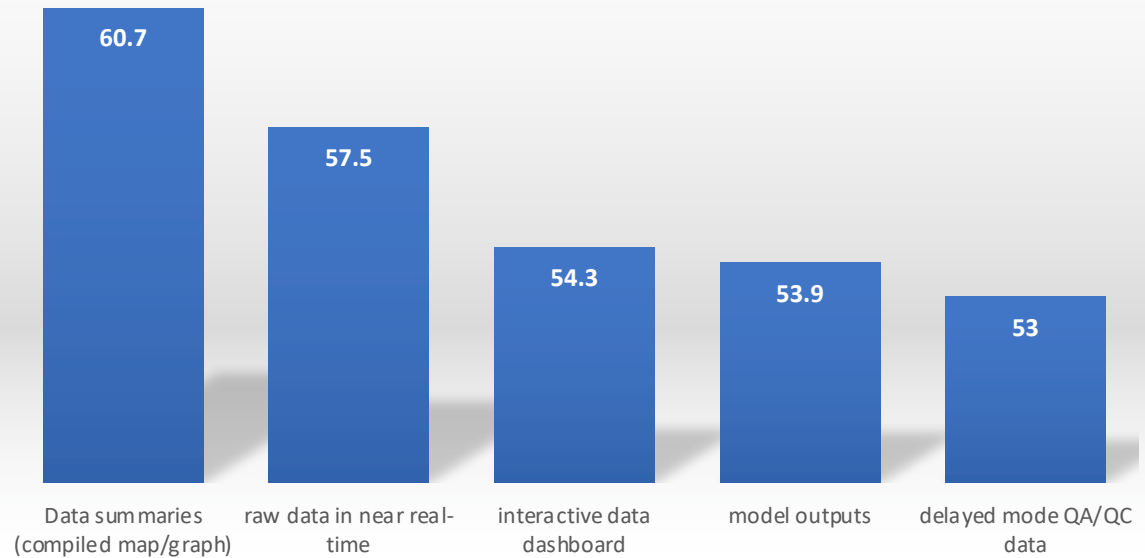

Initial survey results

Why do you need this information?

What format of data/information would you like?

Initial consultation

- Emerging needs for consideration in CoastRI:
 - Collection and aggregation of tide data
 - Water level and water quality within estuaries
 - Coupled water level and land motion data
 - High-resolution, near real-time data streams for forecasting and prediction

Consultation is ongoing and will include state and local government, industry, First Nations communities and more

Timeline

- Oct-Dec: Prioritised consultation with state programs and end-users*
- Jan-Mar: Prioritised consultation with industry partners and end-users*
- Oct-Mar: Consultation and co-design with First Nations
- Apr-May: Program design, proposal drafting
- May: Independent review of the proposed program
- Submission to NCRIS (mid-year, date TBA)

*Note: consultation will occur outside these periods as needed

‘No regrets’ investment criteria

- Align with IMOS strategy and national priorities
- Clear pathways to uptake and use of the data to create impact
- Opportunity for co-investment
- Benefits for multiple stakeholders/end-users
- Avoid duplication of effort/ enhance capability

‘No regrets’ investment

- Coastal and estuarine moorings
 - In initial discussions
- Coastal wave buoys
 - Planning underway

State	Regional operators (incl existing Spotter buoy networks)	Expert advice / national perspectives
WA	Ryan Lowe (UWA), Jeff Hansen (UWA), Mike Cuttler (UWA)	Diana Greenslade (BoM waves), Mark Hemer (CSIRO), Clare Spillman (BoM marine heat waves), Alex Babanin (Uni Melb), Ian Young (Uni Melb)
VIC	Dan Ierodiaconou (DU), Jak McCarrol (DEECA)	
SA	Graziela Miot da Silva (Flinders), Mark Doubell (SARDI)	
NSW	Mike Kinsela (Uni Newcastle), Tom Doyle (NSW DPE)	
TAS	Mark Hemer (CSIRO)	
N. Australia	Jessica B or Madeline Cahill [AIMS]	
QLD	John Ryan (Qld DES), Tom Baldock (UQ)	

Thanks

Thanks for taking the time to join the discussion and help shape the scope and scale of the CoastRI program proposal
